

# » NBOMe Derivatives

**A new class of hallucinogens called 25-NBOMe or NBOMe, sold as research chemicals, has recently appeared in various online-shops.**

The NBOMe compounds are N-methoxybenzyl derivatives of the psychedelic 2C compounds (substituted 2,5-dimethoxyphenethylamines). They act as potent serotonin agonists, particularly at the 5-HT<sub>2A</sub> receptors that are associated with hallucinogenic activity.

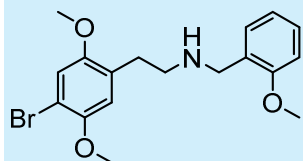

NBOMe compounds are described as highly powerful hallucinogens showing psychoactive effects similar to LSD. Hence they will probably be sold as “legal” alternatives to LSD.

Very little is known about the addictive potential and adverse side effects of these compounds but several fatal and non-fatal cases have been already reported.

The status of these new designer drugs is unregulated in many countries and there are numerous available analogues. This challenges both the legislators and the scientific community.

Lipomed currently supplies a first range of NBOMe derivatives available as ready-to-use calibrated forms and as standard pack sizes of 10 mg, 50 mg and 100 mg. For more information, please check our website [www.lipomed.com](http://www.lipomed.com).
